

CROSS CONNECTION SURVEY REPORT FORM

Water District #49 is committed to providing you with clean and safe drinking water. One of the dangers to water systems is when hazardous contaminants enter the water system. It can occur when there is a pressure loss (Backsiphonage) or over pressurizing (Backpressure) in the Districts water supply. An example of a Backsiphonage event occurs when there is a water main break and the District needs to shut down the main for a repair. A Backpressure event can occur when a pump is used on private plumbing that pumps pressurized water back into District's water supply. The District is mandated by the Department of Health to do everything possible to reduce the risk of a "Cross Connection." Please fill out the following form to help us identify if a backflow device is necessary to keep contaminates out of your water and your neighbor's
